

The simple **secret** most dentists keep hidden...

No one enjoys going to the dentist, but it's the price we pay to keep our teeth in our mouths — and *not in a jar on the bedside table.*

But what your dentist's not telling you is once your mouth is scraped clean of all that plaque and buildup, it's like a starter's pistol... and the race for the health of your mouth is on!

Which type of *oral bacteria* will coat your teeth, gums and even your tongue, gain the upper hand and ultimately decide the health and appearance of your smile?

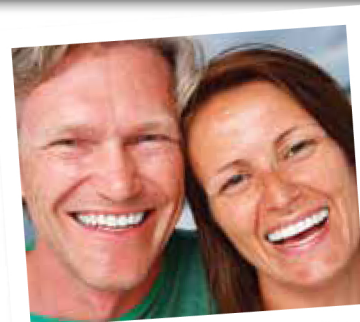

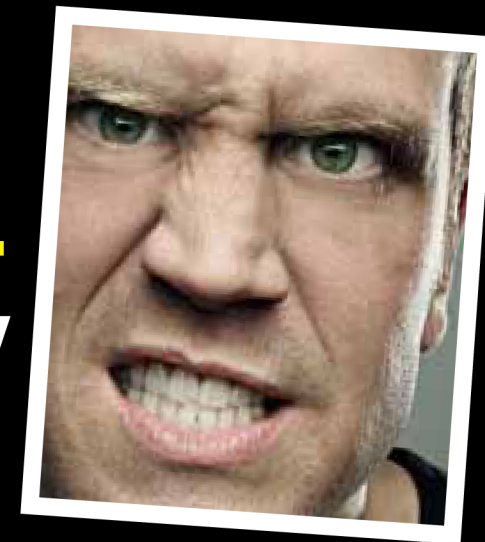

The good guys: Naturally whitening and protecting your teeth and gums, or...

The bad guys: The cause of 90% of bad breath and the root cause of gum and teeth problems!

The good news is, you decide who wins.

► **Because now you'll know a simple secret, even if your dentist doesn't. Details inside...**

Our \$1 "mint" made some people MAD... Until they tried it!

"My two front teeth were very yellow and the dentist wanted to charge a lot of money to whiten them. Decided to try this product and in about one month, my teeth whitened substantially. I am very pleased!"

— Delores D. Plymouth, IN

"I have been taking one FloraBright a day for a couple of weeks and it is helping my gums. I really like this product and will reorder it in the future!"

— Shirley S. Auburn, NE

Now **THEY** know that in just seconds a day, this "mint" has the remarkable power to:

- Strengthen and protect your teeth against decay
- Revitalize tired, beaten gums to a healthy pink
- Return dingy teeth to a lustrous white
- And deliver long lasting fresh breath, too!

**No mint can do all that, of course.
Because it's not really a mint at all...**
